Glucan 1,4-alpha-glucosidase (EC 3.2.1.3) - yeast (Saccharomyces cerevisiae)
N.Alternate names: extracellular glucoamylase; mucin-like protein MUC1; protein YIR01
C.Specias: Saccharomyces cerevisiae
C.Date: 10.Sep-1999 #sequence_revision 10.Sep-1999 #text_change 12.Nov-1999
C.Accession: S48478; A26877; B26877; S27281: JC6123
submitted to the EMBL Data Library, October 1994
A.Reference number: S48478
A.Accession: S48478

A;Title: The nucleotide sequence of an alpha-amylase gene from an alkalopsychrotrophin, A;Reference number: A60999
A;Accession: A60999
A;Molecule type: DNA
A;Residues: 1-1104 <KIM>A;Residues: 1-1104 <KIM>A;Residues: 1-1104 <KIM>A;Residues: 1-104 <KIM>A;Periorical (B:X55799; NID:g296762; PIDN:CAA39321.1; PID:g296763
C;Function: A;Description: catalyzes the hydrolysis of internal 1,4-alpha-D-glucosidic bonds
A;Pathway: glycogen/starch degradation
A;Pathway: glycosidase; hydrolase; polysaccharide degradation
F;1-32/Pomain: signal sequence #status predicted <SIG>F;33-1104/Product: alpha-amylase #status predicted <MAT>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1051 CGTAAGCGTGCCGAGGAAAGAGCATTCGCAGACTGGATCCGTAAGAACGGCAAGAGTGCT 1110

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SUBCELLULAR LOCATION: Secreted.

DOMAIN: THE GLY-RICH REGION IS PROBABLY INVOLVED IN BINDING
CALCIUM, WHICH IS REQUIRED FOR TARGET CELL-BINDING OR CYTOLYTIC
ACTIVITY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Bacteriol. 178:5422-5430(1996).
FUNCTION: BACTERIAL HEMOLYSINS ARE EXOTOXINS THAT ATTACK BLOOD
CELL MEMBRANES AND CAUSE CELL RUPTURE BY MECHANISMS NOT CLEARLY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           -!- DOMAIN: THE THREE TRANSMEMBRANE DOMAINS ARE BELIEVED TO BE INVOLVED IN PORE FORMATION BY THE CYTOTOXIN.

01-JUN-1994 (Rel. 29, Last annotation update)
Hypothetical 122.2 kDa protein in SIR1 3'region precursor.
                                                                                                                                            Gailion L., Dujon B.;
Submitted (MAR-1994) to the EMBL/GenBank/DDBJ databases.
--- SUBCELLULAR LOCATION: CELL WALL (BY SIMILARITY).
--- PTM: EXTENSIVELY O-GLYCOSYLATED (BY SIMILARITY).
--- SIMILARITY: STRONG, TO YEAST PROTEIN FLOI.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1169
